

Task 2: Sales Performance Analysis

Kaggle — bhanupratapbiswas/superstore-sales (9,800 order lines, 4,922 orders, 2015-2018)

\$2.26M	4,922	\$459.48	1,861
Total Revenue	Orders	Avg Order Value	Products

Executive Summary

Analyzed Superstore sales performance across regions, categories, and time. Revenue grew strongly in the most recent two years (+30.6% in 2017, +20.3% in 2018). West and East regions generate 61% of revenue while the South lags. Technology leads on revenue despite fewer orders than Office Supplies, and sales show clear Q4 holiday seasonality. Note: this dataset extract lacks Profit, Discount, and Quantity fields, so profit margin/conversion KPIs could not be computed - all figures are revenue-based. Deliverables: full Jupyter notebook and executive PDF report.

Key Findings

- Revenue grew +30.6% (2017) and +20.3% (2018) after a -4.3% dip in 2016.
- West (31%) and East (30%) regions outperform Central (22%) and South (17%).
- Technology has the highest revenue (\$827K) despite the fewest orders (1,519) of 3 categories.
- Revenue peaks sharply in November/December every year (holiday seasonality).

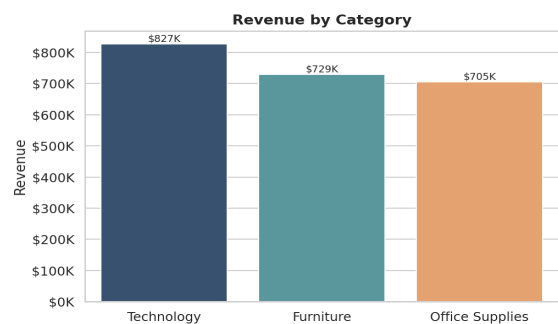

Fig 1. Revenue by category.

Top Recommendations

- Targeted push in the underperforming South region.
- Bundle high-AOV Technology products with Office Supplies to lift AOV.
- Scale inventory/staffing ahead of the Q4 seasonal peak.
- Review or discontinue chronic low-revenue SKUs (e.g. paper clips, rubber bands).
- Build a dedicated B2B motion around high-ticket equipment sales.
